

Amendments To the Claims:

Please amend the claims as shown. Applicants reserve the right to pursue any cancelled claims at a later date.

1.-15. (cancelled)

16. (new) An enclosure, comprising:

a first enclosure base body made of a first base material, the first enclosure base body comprising a first edge;

a second enclosure base body made of a second base material, the second enclosure base body comprising a second edge, wherein the first enclosure base body and the second enclosure base body butt against one another along the first edge and the second edge; and

a seal made of a sealing material, the seal fixed to the first enclosure base body, wherein the sealing material is an elastically deformable material, and wherein the seal rests against the second edge.

17. (new) The enclosure according to Claim 16, wherein the seal is arranged on an outside of the first enclosure base body.

18. (new) The enclosure according to Claim 17, wherein the seal projects beyond the first enclosure base body on the outside in the direction towards the second enclosure base body.

19. (new) The enclosure according to Claim 16, further comprising a labyrinth seal formed by the first enclosure base body, the seal, and the second enclosure base body.

20. (new) The enclosure according to Claim 17, further comprising a labyrinth seal formed by the first enclosure base body, the seal, and the second enclosure base body.

21. (new) The enclosure according to Claim 18, further comprising a labyrinth seal formed by the first enclosure base body, the seal, and the second enclosure base body.

22. (new) The enclosure according to Claim 16, wherein the second edge is formed by a harder material than the seal.

23. (new) The enclosure according to Claim 17, wherein the second edge is formed by a harder material than the seal.

24. (new) The enclosure according to Claim 16, wherein the first enclosure base body is made from a hard plastic and the seal from a softer plastic compared to the hard plastic.

25. (new) The enclosure according to Claim 24, wherein the first enclosure base body and the seal are made using the two-color or two-component injection molding method.

26. (new) The enclosure according to Claim 16, wherein the seal comprises a thermoplastic elastomer.

27. (new) The enclosure according to Claim 16, wherein the first base material comprises a thermoplastic material.

28. (new) The enclosure according to Claim 16, wherein the sealing material having a Shore hardness between 50 and 60.

29. (new) The enclosure according to Claim 16, for accommodating electrical, electronic, or mechanical components, or foodstuffs.

30. (new) The enclosure according to Claim 16, used as a housing for a mobile telecommunication device.

31. (new) The enclosure according to Claim 30, further comprising:

    a third enclosure base body for accommodating an exchangeable electrical power source, wherein

        the third enclosure base body butts either against the first enclosure base body or against the second enclosure base body and is sealed to the respective enclosure base body by a further elastic seal, and wherein

the further seal is arranged on the third enclosure base body or on the second or the first enclosure base body.

32. (new) A method for producing a housing part for a mobile telecommunication device, comprising:

- injecting a hard component onto a fixed tool;
- shaping the hard component by a first countertool moveable in a mold release direction;
- injecting a soft component forming an elastic seal onto the hard component; and
- shaping the soft component by a second countertool which is moved in the same mold release direction as the first countertool for releasing the mold, wherein the method utilizes a two-color injection molding process and the housing part is formed by the hard component and the seal.

33. (new) The method according to Claim 32, wherein a rotary platen mold is used, the rotation allowing simultaneous processing of two housing parts, one having the hard component applied and one having the soft component applied.

34. (new) The method according to Claim 32, wherein the soft component is applied to the hard component while the latter is still warm.

35. (new) A housing part, comprising:

- a base body having an edge; and
- a seal made of a sealing material, the seal fixed to the base body, wherein the sealing material is an elastically deformable material, wherein the base body is made from a hard plastic and the seal is made from a softer plastic compared to the hard plastic, wherein the base body and the seal form an integral part and are made by using a two-color injection molding process, wherein the seal is arranged on an outside of the first enclosure base body, and wherein the seal projects beyond the first enclosure base body on the outside in the direction towards the second enclosure base body.
